

TILE & HARDWOOD FLOORING UNDERLAYMENT

AQUABAR "B" UNDERLAYMENT

Ideal for wood flooring and tile applications!

When you block moisture vapor from creeping behind finish materials or reaching moisture-sensitive substrates, you help increase the useful life and appearance of finish surfaces.

With a moisture vapor permeance of less than 1, Aquabar "B" is a superior vapor retarder under wood flooring applications. Aquabar "B" helps slow moisture vapor originating below the floor system, allowing the wood flooring to acclimate gradually. By reducing the rate of moisture migration, Aquabar "B" protects against moisture vapor related to floor problems such as buckling, cupping or cracking. As a semi-permeable material, Aquabar "B" is much less likely than common poly film to trap moisture condensation between it and the sub-floor. Aquabar "B" also acts as a "slip sheet" to minimize dust and reduce noise.

Aquabar "B" is also suitable in interior tile or stone applications as a moisture retardent membrane (or cleavage membrane) on walls, countertops, or residential showers for use behind cement backer units. It is also suitable for use as a cleavage membrane in mortar bed applications over wood or concrete substrates. Aquabar "B" reduces the potential for and extent of damage caused by moisture vapor migration in tile installations.

Aquabar "B" is often considered to be cleaner and easier to work with than other materials, such as roofing felt and poly firm. Because it is an effective moisture vapor retarder, Aquabar "B" reduces vapor migration to help protect wood floors, tile substrates, and floor and wall cavities from the damaging effects of moisture.

SIZE & WEIGHT

Aquabar "B" is supplied in 36" wide by 167' lineal feet (500 sq ft) and 334' lineal feet (1000 sq ft) rolls; product weight is approximately 3 lbs/100 sq ft.

INSTALLATION

Cut Aquabar "B" to length and position over substrate as needed for proper coverage. It may be applied to wall framing either horizontally (best method) or vertically.
