

T&G ROOF & TRUCK BOX DECKING

AVAILABLE IN 2 X 6, 2 X 8, 3 X 6 & 4 X 6 IN DOUGLAS FIR, SPRUCE OR CEDAR

WHY DOUBLE TIGHT?

The American Wood Council stipulates the maximum moisture content shall be 19% for 3 and 4 inch decking. Double Tight Decking is dried to a maximum moisture content of 15%, but that's only part of the reason to insist on Double Tight Decking. Innovation is the result of feedback from Architects, and builders. Seeing the need to improve on the industry standard, we have succeeded in producing a product that compensates for gaps produced during nailing. Our proprietary pattern vastly improves the ease of installation. This in itself helps to insure an initial tight fit.

DECKING PRODUCTS

Doubletree Forest Products Decking is your solid choice for a permanent roof deck with good insulating properties and a ready-to-finish interior ceiling. Roof decking is especially suited for use with post and beam construction. Quality is important to us and its not something that just happens. We took a hard look at existing products and set out to improve on them. We offer a unique pattern that makes for an easier installation, resulting in an improved final finish.

Its not just our unique pattern that says quality. There is an old adage that reads Waste not, want not. The less we waste, the less we want in the future. As good stewards of our forest,

we always keep this old adage in the forefront of our remanufacturing process. It starts with careful selection of the best fibre. We purchase high quality fibre to produce a high quality product. High quality fibre simply means less waste, and a high quality finished product.

CEDAR PRODUCTS

Cedar is one of nature's most durable, decay resistant softwoods. Cedar equates to a quality that will last beyond this generation. If you have chosen Cedar, you have made the right choice. We warehouse an ever increasing variety of Western Red Cedar products, such as our new "Heritage" line, and are thus able to participate in volume purchasing.
